Market Timing

A Futile Exercise

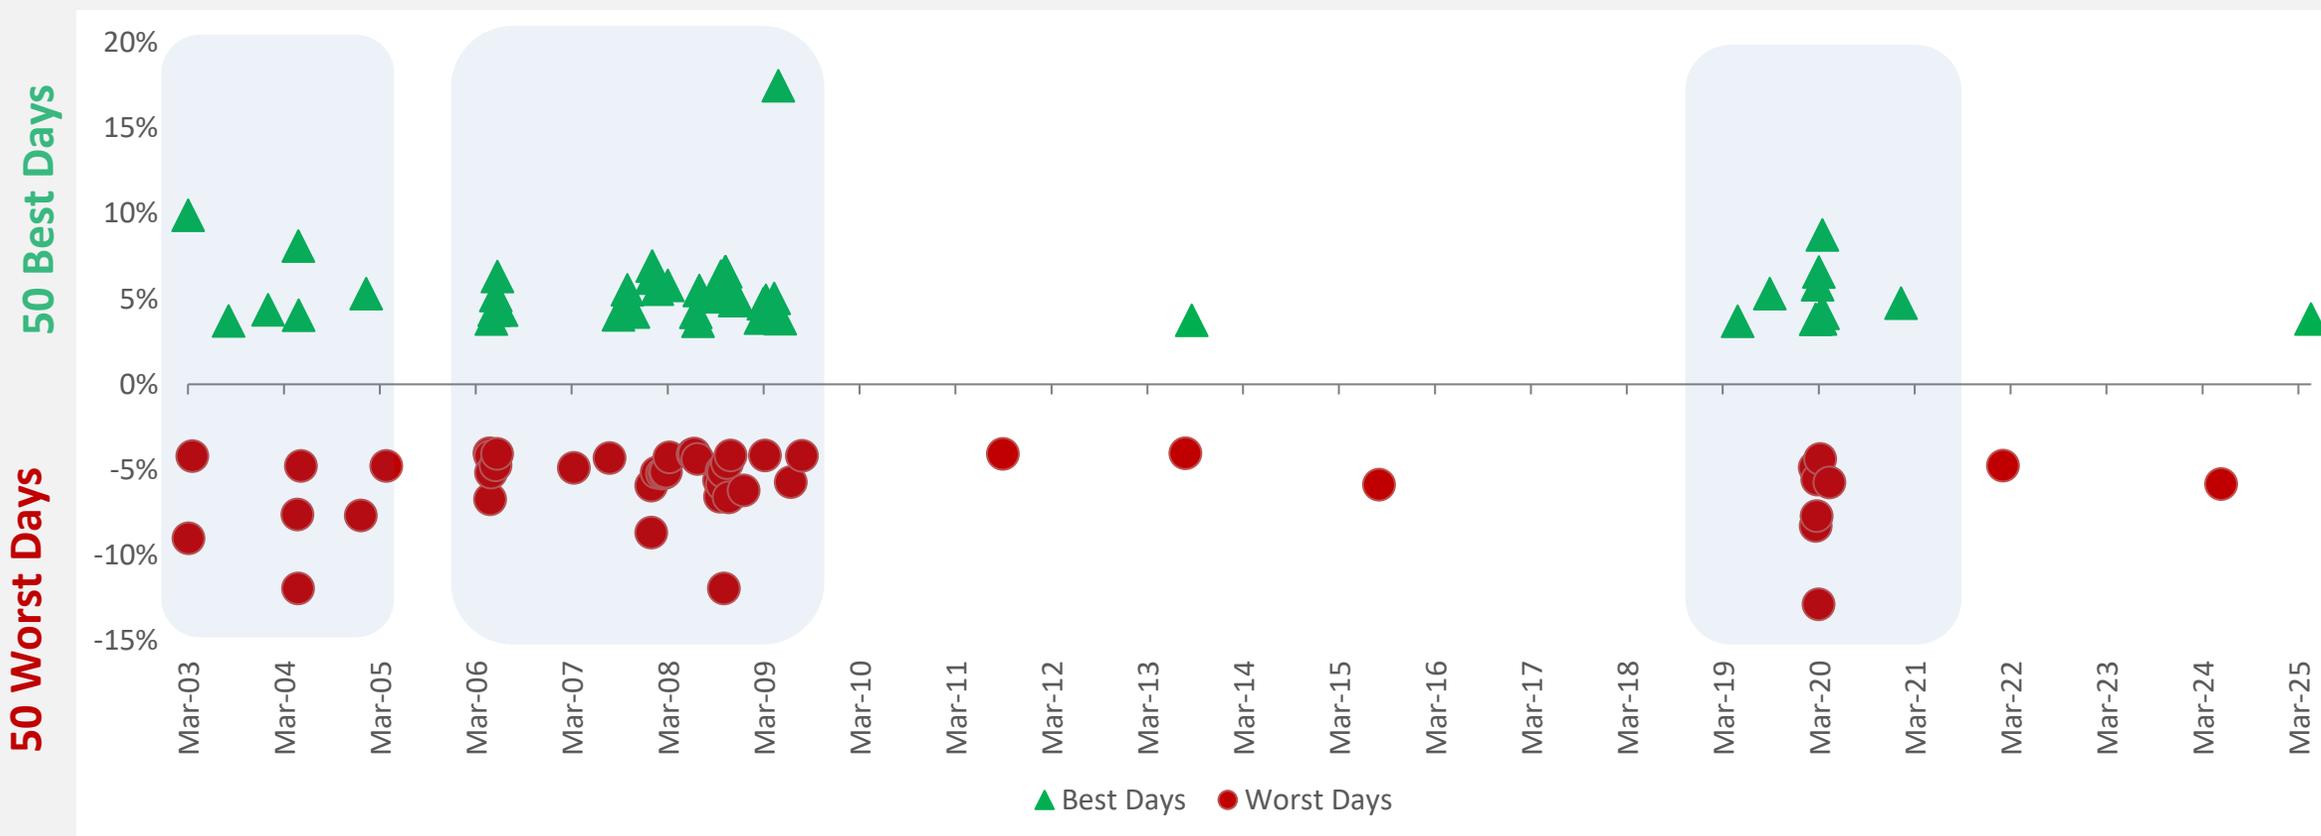

Time in the Market Matters More Than Timing the Market

If an investor attempts to time the market and, out of a total of 5,572 days, misses the 50 best days of returns, their annualized return would fall from 15.2% to 2.7%. To capture those 50 best days, they need to stay invested throughout the entire period.

Source: AMFI, . Nifty 50 Index Fund: UTI Nifty 50 Index Fund Reg – Growth used for above analysis, Period Apr 2003 to Jan 2026.

**Why Do We Often Miss Best Days in the Market?
Because They are Usually Clustered Around the Worst Ones!**

Many investors believe they can predict market movements and time their trades perfectly to maximize gains. However, history shows that even the most seasoned professionals struggle to do this consistently. Markets are unpredictable in the short-term, and the biggest gains often come in short, unexpected bursts. Missing just a few of these best-performing days can significantly impact long-term returns. Instead of chasing the illusion of perfect timing, a disciplined, long-term investment approach is often the wiser strategy.

A booming economy often brings stronger markets and FII/FPI inflows, supporting a stable or appreciating currency. Since currency strength reflects past momentum, not future growth, So Currency appreciation or depreciation is a **lagging indicator** :For instance, a **depreciated currency usually signals already weak markets**, and vice versa.

 In our view: Four monthly SIPs with a 7-day gap (e.g., on the 7th, 14th, 21st, and 28th of the month) are just as effective as a weekly SIP with the same total investment amount. This approach results in only 48 transactions per year, significantly reducing the likelihood of SIP failures.
